

FMEA & DRBFM Services – Scope of Services

Overview

We facilitate FMEA workshops professionally, methodically and with practical expertise — whether Design FMEA (DFMEA), Process FMEA (PFMEA) or Interface FMEA. The goal is early identification and elimination of weaknesses to ensure stable products and processes.

Core Services

- **FMEA Moderation (DFMEA, PFMEA, Interface FMEA)**
Structured workshops to identify risks, potential failure modes and improvement opportunities.
- **DRBFM Workshops**
Methodical assessment of design or process changes (Design Review Based on Failure Mode) to prevent recurring issues and increase product robustness.
- **Risk Assessment & Action Tracking**
Support in prioritizing risks, defining actions and consistently tracking their implementation — ensuring FMEA becomes a living process rather than mere documentation.
- **Moderation According to AIAG/VDA Standard**
Standards-compliant and audit-proof facilitation with clear documentation, structured evaluations and transparent action follow-up.
- **Cross-Functional Collaboration**
Workshops involving development, production, quality and suppliers to ensure a comprehensive and multi-perspective risk analysis.

Benefits for Clients

- Clear risk overview and effective mitigation measures
- Higher product and process quality
- Prevention of recurring issues
- Reduced failure probability and more stable operations
- Audit-proof and standards-compliant FMEA documentation
- Better collaboration and well-founded decision-making

Engagement Model

- Individual workshops, series of workshops or full FMEA support
- Assistance during early concept phases or for existing products/processes
- Flexible integration into development, quality or project teams
